### Chemistry: pH, pOH, Neutralization

Find molarity.

- 1) If 28.0 grams of KOH are added to H<sub>2</sub>O to create 2.5 liters of solution, what is the [H<sup>+</sup>] and [OH<sup>-</sup>] of the solution? What is the pH and pOH of this solution?  
 $([H^+] = 5.0 \times 10^{-14} : [OH^-] = 2.0 \times 10^{-1})$

$$[H^+][OH^-] = 1.0 \times 10^{-14}$$

$$[H^+][OH^-] = 1.0 \times 10^{-14}$$

$$\frac{1 \text{ mol KOH}}{56.11 \text{ g KOH}} \left| \begin{array}{c} 28.0 \text{ g KOH} \\ 2.5 \text{ L KOH} \end{array} \right. = \boxed{0.20 \text{ M KOH} = [OH^-]} \quad \frac{[OH^-]}{[OH^-]} = \boxed{[OH^-]}$$

$$[H^+] = 5.0 \times 10^{-14}$$

$$pH = -\log[H^+] = -\log(5.0 \times 10^{-14}) = \boxed{13.3 = pH}$$

$$pOH = -\log[OH^-] = -\log(0.20) = \boxed{0.70 = pOH}$$

- 2) To make 500 mL of a NaOH solution that has a pH of 11, what mass of NaOH is required?

$$(2 \times 10^{-2} \text{ g})$$

$$pH = 11 \quad pOH = 3 \quad [OH^-] = 10^{-3} = .001 \text{ M}$$

$$\frac{40.0 \text{ g NaOH}}{1 \text{ mol NaOH}} \left| \begin{array}{c} 0.001 \text{ mol NaOH} \\ 1 \text{ L NaOH} \end{array} \right| \begin{array}{c} 1 \text{ L NaOH} \\ 1000 \text{ mL NaOH} \end{array} \left| \begin{array}{c} 500 \text{ mL NaOH} \\ \dots \end{array} \right. = \boxed{0.02 \text{ g NaOH}}$$

$$\rightarrow \frac{0.02 \text{ mol NaOH}}{1 \text{ L NaOH soln.}}$$

- 3) A student found that it required 48.0 mL of 0.03 M NaOH to neutralize 72.0 mL of HCl. What was the concentration of the HCl? (0.02 M)

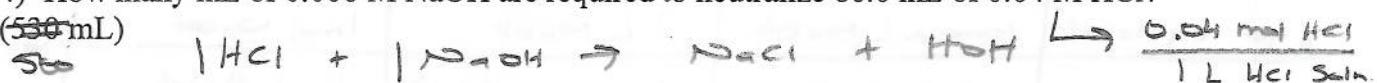

$$\frac{1 \text{ mol HCl}}{1 \text{ mol NaOH}} \left| \begin{array}{c} 0.03 \text{ mol NaOH} \\ 1 \text{ L NaOH} \end{array} \right| \begin{array}{c} 1 \text{ L NaOH} \\ 1000 \text{ mL NaOH} \end{array} \left| \begin{array}{c} 48.0 \text{ mL NaOH} \\ 72.0 \text{ mL HCl} \end{array} \right| \begin{array}{c} 1000 \text{ mL HCl} \\ 1 \text{ L HCl} \end{array} = \boxed{0.02 \text{ M HCl}}$$

$$\rightarrow \frac{0.006 \text{ mol NaOH}}{1 \text{ L NaOH soln.}}$$

- 4) How many mL of 0.006 M NaOH are required to neutralize 80.0 mL of 0.04 M HCl?

(500 mL)

$$\frac{100 \text{ mL NaOH}}{1 \text{ L NaOH}} \left| \begin{array}{c} 1 \text{ L NaOH} \\ 0.006 \text{ mol NaOH} \end{array} \right| \begin{array}{c} 1 \text{ mol NaOH} \\ 1 \text{ mol HCl} \end{array} \left| \begin{array}{c} 0.04 \text{ mol HCl} \\ 1 \text{ L HCl} \end{array} \right| \begin{array}{c} 1 \text{ L HCl} \\ 1000 \text{ mL HCl} \end{array} \left| \begin{array}{c} 80.0 \text{ mL HCl} \\ 500 \text{ mL NaOH} \end{array} \right. = \boxed{500 \text{ mL NaOH}}$$

5) Write the equation for the neutralization of the strong acid HNO<sub>3</sub> with the strong base KOH.

For #5: Neutralization reaction between strong acid HNO<sub>3</sub> and strong base KOH  
Neutralizes acid to H<sub>2</sub>O has H<sub>2</sub>O and O. Combines with OH<sup>-</sup>  
Neutralizes acid to H<sub>2</sub>O has H<sub>2</sub>O and O. Combines with OH<sup>-</sup>

6) How many mL of 0.0006 M KOH would be required to neutralize 80.0 mL of 0.04 M HNO<sub>3</sub>, according to the equation in #5? (5330 mL)

1000 mL KOH	1 L KOH	1 mol KOH	0.04 mol HNO <sub>3</sub>	1 L HNO <sub>3</sub>	80.0 mL HNO <sub>3</sub>
1 L KOH	0.0006 mol KOH	1 mol HNO <sub>3</sub>	1 L HNO <sub>3</sub>	1000 mL HNO <sub>3</sub>	
= <span style="border: 1px solid black; padding: 2px;">5330 mL KOH</span>					

7) What is the pH of a solution made by combining 0.001 moles of KOH and 0.002 moles of HCl and diluting to a final volume of 100 mL? What is the pOH of this solution?  
(pH = 2; pOH = 12)

8) 1.40 grams of a solid unknown acid are dissolved in 100 mL of H<sub>2</sub>O. It takes 112 mL of 0.2 M NaOH to neutralize this acid. What is the molecular mass of the unknown acid (62.5 g/mole)  
(Assume a 1 : 1 molar ratio.)

1.40 g Acid	1000 mL NaOH	1 L NaOH	1 mol NaOH	= <span style="border: 1px solid black; padding: 2px;">62.5 g/mol Acid</span>
112 mL NaOH	1 L NaOH	6.2 mol NaOH	1 mol Acid
