

## Pre-Calc 2.4-2.6 Quiz Review

Name \_\_\_\_\_

1) Find the quadratic model to represent the data. Use Calculator.

|       |   |     |     |     |     |     |     |       |
|-------|---|-----|-----|-----|-----|-----|-----|-------|
| $L_1$ | x | 25  | 50  | 75  | 100 | 125 | 150 | 175   |
| $L_2$ | y | 150 | 178 | 216 | 265 | 323 | 392 | 470.4 |

$$y = 0.008x^2 + 0.518x + 131.88$$

2) Write an exponential function that fits the points: (0, 4) and (3, 32). Show work.

|   |   |    |
|---|---|----|
| X | 0 | 3  |
| Y | 4 | 32 |

$$b^{3-0} = \frac{32}{4}$$

$$\sqrt[3]{b^3} = \sqrt[3]{8}$$

$$b = 2$$

$$y = a(2)^x$$

$$4 = a(2)^0$$

$$4 = a$$

$$\boxed{y = 4(2)^x}$$

3) State whether the function described by the equation models exponential growth, exponential decay or neither.

$$a) h(x) = (3.2)(x)^5 \quad b) g(x) = (7.5)\left(\frac{1}{4}\right)^x \quad c) f(x) = (0.5)(2.8)^x$$

• Neither

- "x" is not the exponent

$$\begin{matrix} b \\ \downarrow \\ b < 1 \end{matrix}$$

$$\begin{matrix} \text{decay} \\ \downarrow \\ 0 < b < 1 \end{matrix}$$

$$\begin{matrix} \text{growth} \\ \downarrow \\ b > 1 \end{matrix}$$

4) A certain substance has a half-life of 30 years. If a sample of 100 grams is being observed, how much will remain in 40 years? When will only 2 grams remain?

$$(0.5)^{\frac{x}{30}} = (b^{30})^{\frac{x}{30}}$$

$$b = 0.977$$

$$y = 100(0.977)^{40}$$

$$\boxed{y = 39.43 \text{ g}}$$

after 40 yrs

$$\frac{2}{100} = \frac{100(0.977)^x}{100}$$

$$\frac{2}{100} = .977^x$$

$$\log \frac{2}{100} = \log .977^x$$

$$\frac{\log \frac{2}{100}}{\log .977} = \frac{x \log .977}{\log .977}$$

$$\boxed{x = 168 \text{ yrs}}$$
